

$\phi = 2$
BMAJ = 20
BMIN = 50

This contour plot shows a single, elongated, elliptical Gaussian-like distribution. The major axis is oriented diagonally from the bottom-left to the top-right. The color scale indicates a Gaussian Uniform Ratio, with the highest values (red/orange) concentrated in the center of the ellipse.

$\phi = 3$
BMAJ = 30
BMIN = 40

This contour plot shows a single, elongated, elliptical Gaussian-like distribution. The major axis is oriented diagonally from the bottom-left to the top-right. The color scale indicates a Gaussian Uniform Ratio, with the highest values (red/orange) concentrated in the center of the ellipse.

$\phi = 4$
BMAJ = 40
BMIN = 30

This contour plot shows a single, elongated, elliptical Gaussian-like distribution. The major axis is oriented diagonally from the bottom-left to the top-right. The color scale indicates a Gaussian Uniform Ratio, with the highest values (red/orange) concentrated in the center of the ellipse.

$\phi = 7$
BMAJ = 50
BMIN = 20

This contour plot shows a single, elongated, elliptical Gaussian-like distribution. The major axis is oriented diagonally from the bottom-left to the top-right. The color scale indicates a Gaussian Uniform Ratio, with the highest values (red/orange) concentrated in the center of the ellipse.
